

TorqFall — What The Event Needs

Everything to physically run the full standalone event (3000 sq ft, 100–300 people, Mumbai). Rented stock cars, kit DIY'd by us (hardware store + hands + 3D printer for small parts). No permits/timeline here — just the parts. **Prices verified against live India/Mumbai listings, Sept 2026** (sources at the bottom).

Quantities derived from the rulebook + Level Directory: 9 × 4 m lane, 21 rounds from ONE modular kit, 6–8 cars/heat.

1. Cars (rented — the one thing to LOCK first)

Item	Qty — why this qty	How we use it	Where	Est ₹
1/16 buggies, stock, charged, with controllers	12–16 — 6–8 live per heat (rulebook §2) + 4–6 on charge rotation + 2 swap spares	Every heat all day pulls from this pool; the game itself	RC club / hobby shop partner (Mumbai) — they bring batteries + spares	15,000–30,000 / day
Foam bump-rings, zip-tied per car (comes off clean)	16 + 4 spares — one 1.6 m noodle wraps ~1.5 car perimeters; cut from the noodle lot in §3	Protects the rented bodywork in pack pile-ups; nothing bolted to a rented car	We make (noodles + zip ties)	1,500
Spare batteries + charging station	2–3 packs/car — a pack dies in ~10–15 min; rotation is the real throughput limiter	Pit keeps 6–8 cars always live between heats	Comes with the rental partner	in rental

The smart deal: hire the club, not just the cars — their guys run the pit (repairs + charging) as part of the price. **Price reality:** there is no listed hobby-fleet rental market in Mumbai (only kids-RC party hire, JesVenues-type) — this is a negotiated deal. Anchor it: the car itself is ₹10–13k new (WLtoys 144-class), so ₹1,200–2,000/car/day + 2 pit crew is a fair opening. The deal must also name **parallel charging for ≥15 packs at once** (count charger ports): the run plan's sustained pace burns ~15–22 packs/hr against 45–60 min recharges — 4–6 chargers cannot hold it. Without a car partner nothing runs; this is the first phone call.

2. The floor

Item	Qty — why this qty	How we use it	Where	Est ₹
Artificial grass roll, 25–35 mm	800–1,200 sq ft — lane 9 × 4 m = 390 sq ft + start staging & finish runoff + the Tier-3 pen rounds (Hex-a-Fall / Grinder, ~6 × 6 m) laid alongside + cut wastage. NOT all 3000 (spectator floor stays bare)	The arena surface: car grip, the on-camera look, defines the play zone	Turf dealer (Mumbai wholesale ₹30–55/sq ft verified) — dealer beats Amazon at this qty. Range = the rate band × the area band (800 × ₹30 to 1,200 × ₹55); buy the full 1,200 sq ft build only under ~₹50/sq ft, else trim the area	24,000–66,000

Item	Qty — why this qty	How we use it	Where	Est ₹
Gaffer + double-sided carpet tape	12 rolls — every turf edge + every obstacle foot, re-taped through the day	Turf stays flat (cars snag lifted edges), obstacle feet stay planted	Hardware store	3,000

Master-agent fix (2026-09-06): the EVA mat line was respec'd from "20–25 mm @ ₹150–250" to "**~10 mm @ ₹150–250** (verified), stacked for depth" — a single 20–25 mm mat actually runs ₹400–599, so buying thick would have doubled that line; we use thin mats stacked instead. No total change.

3. The gauntlet kit (one DIY weekend + a motor bench-test — builds ALL 21 rounds + the 3 spares)

One modular kit, rearranged per round (Level Directory): a round change is a 2–5 min layout change, not a rebuild. The 7 lines below the tools row were added 2026-09-06 — the earlier ₹34–46k kit silently couldn't build 7 of the rounds (no spinner motors, balls/barrels, ramp, 3rd sweeper, tunnel kit, Collapse-Gate wall stock, or balloons). Coverage is now verified line-by-line (check under the subtotal).

Item	Qty — why this qty	How we use it	Where	Est ₹
Pool noodles	~58–60 — barrier rail 22–24 m (two 9 m sides + funnel + returns) × 2 courses ≈ 30 · gate uprights 6–8 · bump rings 14 (\$1's 20 rings — 16 + 4 spares — at ~1.5 rings per noodle) · spares/breakage 8	Side barriers (shoved cars bounce back in, not into crowd), Noodle Weave gates, Bumper Alley walls, car rings	Wholesale/IndiaMART ₹120–250/pc (Amazon singles ₹250–650 — don't)	8,000–12,000
EVA interlocking mats, 60×60 cm, ~10 mm (stacked for depth)	40 — Block Field: 24 blocks ≈ 12 mats · Bumper Alley / beam edging 12 · raised-round build stock 10 (mats stacked + turf-offcut-topped BUILD the Tightrope beam, King-of-the-Hill mound and Bridge Squeeze deck — one raised round is live at a time, so 10 mats cycle between them) · spares 6	Foam blocks cars stumble over, soft walls, and the stack that builds + pads every raised element	Amazon / IndiaMART ₹150–250/pc (10 mm verified — depth comes from stacking; single 20–25 mm mats run ₹400–599/pc, which we don't buy)	6,000–10,000
PVC pipe + joints, 1"	~60 m — 2 arches 14 m · pendulum goalpost 9 m · 3 rising gates 10 m · spinner-gate frame 4 m · 2 sweeper handles 3 m · T-feet 6 m · spare 12 m	The skeleton of every framed obstacle in the 21-round library	Plumbing store ~₹110/m + ₹1–1.5k joints	7,000–9,000
Pendulum: foam cylinder + rope	1 — hangs off the goalpost frame above the pinch gate	Pendulum Pass + The Full Gauntlet: the marshal-released swat	Made from above + foam	1,500

Item	Qty — why this qty	How we use it	Where	Est ₹
Sweeper bar: foam bar + handle	2 — one live + one for Twin Sweepers / instant swap	The signature wipe-out obstacle; marshal-swung	Made from above	1,000
Start + finish arches with LED strip	2 — one each end of the lane	Launch + finish line on camera; the lit money-frame	PVC (counted above) + 2 × 5 m LED strips ₹500–800 each + battery packs	2,500–4,000
Sandbags / water-can weights	~32 — 12 gate feet + 8 arch/pendulum/spinner legs + 12 barrier stakes (one per ~1.5–2 m of rail)	Every upright stays standing when hit; nothing screwed to the venue floor	Cement-store bags + sand	2,500–3,500
Zip ties, velcro straps, cutter, rope, spare foam	lot — re-tied constantly; velcro is the no-damage fastener on rented cars	Assembly + every strap-on attachment	Hardware store	4,000
Build tools: 15 m tape measure, spirit level, chalk line, markers	1 set — the lane must square up in a rented hall in ≤4 h	Marking the 9×4 lane, gate spacing, level check on raised bits	Hardware store	1,000–1,500
Spinner drive: 2 × 12V low-RPM gearmotor (wiper-motor class) + PWM speed module + SLA battery/PSU + printed hub + switch	2 — Spinner Gate runs 1, The Grinder runs both at once	Spins the foam-cross on the PVC spinner frame (frame already in the PVC line); low RPM, foam arms only	Auto-parts / robotics shop + our printer	2,000–4,000
Foam balls + DIY foam barrels	6 balls + 2 barrels — Roller Rush needs a rolling clutter field; Barrel Roll needs 1 rolling + 1 spare	Marshal-rolled obstacles; barrels = EVA/foam sheet rolled on a rope core	Sports/pool shop + we make	1,000–3,000
Ramp: plywood core + EVA top, ~1.2 m wide low wedge	1 — Ramp Scramble; the Level Directory's kit list names ramps	The wide low up-and-over; foam-topped so it's soft + grippy at the crest	We make (hardware store)	1,000–2,000
3rd sweeper bar	1 — Hex-a-Fall works 3 sweepers at once (2 already above)	The pen-finale's third marshal-swung sweeper	Made from PVC + foam (as above)	500
Whack Tunnel kit: tarp/cloth cover + 6 foam paddles	1 + 6 — cover spans the 2 PVC arches; paddles = noodle heads on short PVC handles	The covered stretch with side-whacks pushed in through the gaps	We make	800–1,500

Item	Qty — why this qty	How we use it	Where	Est ₹
Collapse Gate wall stock: pre-scored cardboard panels	~40 /event — one breakable wall per Tier-3 final + rebuilds	The smash finish; same kabadiwala source + scoring jig as TorqSiege — the cutting kit itself (knives, ruler, jig, mat — ₹1,500, priced in [[TorqSiege — What The Event Needs]] §1) is bought at TorqFall's T-13 , since event #1's build weekend scores these panels; that doc explicitly allows this pre-gate buy. Cash stays counted on TorqSiege's kit line (no double-count); if TorqSiege never runs, TorqFall's contingency absorbs the ₹1.5k	Kabadiwala ₹15–25/kg	500–1,000 /event
Balloons + string	3–5 × 100-packs /event — ~20 per run (one pack ≈ 5 runs only), and a qualifying block runs 10–20 heats, so 300–500 balloons whenever Balloon Gauntlet is in the day's shuffle	The burst-through curtain; pops = crowd noise. A per-event consumable like the Collapse-Gate cardboard — NOT one-time kit	Party shop (₹300–500/100-pack)	900–2,500 /event

Kit subtotal ≈ ₹40,000–61,000. Everything soft, everything van-packable, built once and reused every event (Collapse-Gate cardboard ₹0.5–1k and balloons ₹0.9–2.5k are the two per-event consumable lines in the list — they recur every event; everything else is one-time).

Round coverage check (all 21 + 3 spares): T1 Funnel Dash / Noodle Weave / Block Field / Sweeper / Bumper Alley = noodles + EVA + sweeper bars · Roller Rush = foam balls/barrels · Ramp Scramble = ramp · Balloon Gauntlet (spare) = balloons. T2 Pendulum Pass / Twin Sweepers / Chicane / Rising Gates = pendulum + 2 sweepers + noodles + PVC gates · Spinner Gate = spinner drive #1 · Whack Tunnel = tunnel kit · Barrel Roll = foam barrel · Bridge Squeeze (spare) = stacked EVA deck. T3 Full Gauntlet / Sudden-Death Sweeper / The Reverse (spare) = existing stations · Hex-a-Fall = all 3 sweepers + rollers · The Grinder = both spinner drives + a sweeper · Tightrope / King of the Hill = stacked-EVA beam/mound · Collapse Gate = pre-scored cardboard wall.

4. Drivers' stand (the renders show it — it was missing from this list)

Item	Qty — why this qty	How we use it	Where	Est ₹
Rented platform sections, 4×8 ft wooden deck	2 (≈ 8×8 ft, 1–1.5 ft high) + rail — holds 6–8 drivers per heat side-on to the lane	Drivers see the whole lane over the crowd; doubles as the hero camera backdrop	Event rental (Mumbai: ~₹2,000/section or ₹75/sq ft verified)	4,000–8,000 /day

People stand on it → rent certified staging, don't DIY this one piece.

5. The show layer

Item	Qty	How we use it	Where	Est ₹
Projector + screen (bracket + live cam feed)	1	Bracket, round names, live overhead feed — makes it a show	AV rental (Mumbai verified ₹899–2,500 base; event-grade + screen + delivery)	2,500–6,000 /day
— LED-wall upgrade (only if budget clears)	1	Same job, daylight-proof and premium on camera	AV rental	+15,000–25,000 /day
PA + 2 wireless mics	1 set	The MC is the energy of the event; countdowns, eliminations, hype	AV rental (small sets from ₹600/day; event set incl. delivery + op)	4,000–8,000 /day
LED uplights, orange + magenta	8	House colours on the walls; the room reads "event", not "hall" — but uplights alone put no TorqWars NAME on camera (next line does)	Event rental (₹300–800/fixture/day)	3,000–6,000 /day
Branded flex backdrop + 2 banners	1 set	The TorqWars name behind the drivers' stand = the reel background on every clip (Build & Fabrication Plan calls it "must look clean"; content-first event, so the brand must be in frame)	Local flex-print shop — a print is a buy like signage, not fabrication, so the DIY-kit lock holds	3,000–8,000 one-time, reused
Laptop running bracket + music	1	Bracket sheet + playlist + countdown clock	Ours	0

6. Content rig

Item	Qty	How we use it	Where	Est ₹
Overhead cam: phone + pole/truss clamp above lane	1	THE shot — funnel pile-up + sweeper wipe-out from above	Ours + mount	1,500
Phone tripods + clamps (low finish-line + roving gimbal)	2–3	Photo-finish low angle; roving crowd-reaction cam	Ours + ₹500–1,200/mount	2,000–3,500
Onboard FPV cam (strapped, optional)	1	First-person Fall Guys POV for reels	SJCAM-class 4K action cam (verified ₹4–6k)	0–6,000

7. People (12 on the day)

Event lead (Yash) · 3 marshals (2 hired hands + 1 friend) · pit = the RC club's crew (in the car deal) · MC (hire — non-negotiable) · DJ/music (friend or hire) · 2 on cameras (friends or hire) · 1 registration/queue (friend)

- 1 safety/floater (friend).

Hired cost, itemized — budget the fully-hired number; friends showing up is upside, not a plan:

Hire	₹/day
MC	5,000–10,000
2 hired hands (marshals)	2,000–3,000
DJ (if no friend)	3,000–6,000
1–2 camera operators (if no friends)	3,000–6,000
Fully hired	13,000–25,000
<i>With friends covering DJ + cameras</i>	<i>7,000–13,000</i>

8. Ops kit (expanded — the small stuff that stalls an event when missing)

Item	Qty — why	How we use it	Est ₹
Registration table + 4 chairs	1 set — entry desk	Waivers, wristbanding, heat assignment	1,000–2,000 (rent/venue)
Tyvek wristbands	300 — max crowd, one each	Paid/waivered = banded; marshals police the lane line by wrist	800–1,200
Printed waivers + safety/round signage	300 + 10 boards	Sign-in + "behind the rail" + round names on camera	1,500–2,500
Marker board (bracket backup)	1	Bracket survives a projector failure	500
Queue line: 6 DIY posts (PVC + sandbag base) + rope	~20 m — snake for 30–60 waiting drivers	The visible fair queue; feeds heats without marshal shouting	1,000 (buying stanchions is ₹900–1,200/pc — skip)
Hi-vis vests ×6 + marshal gloves ×4	crew who enter the lane	Marshals visibly official + hands protected grabbing live cars	1,500–2,000
Car number tags (tape + printed velcro bibs)	16 sets	Callable cars ("Car 7 is out!") for MC + bracket	300–500
Winner trophy + 3 medals	1 set — the day has a champion (rulebook §2: bracket → Grand Final)	Podium moment = the closing reel shot	1,000–2,000
Bins ×4 + garbage bags	spread around floor	300 people generate trash; venue handback clean	1,500–2,500
Crew water: 2 × 20 L cans + cups	12 crew, full day on their feet	Nobody leaves post to find water	800–1,500
Crew meals: lunch + snacks + chai	12 crew × a full event day (~₹125–250/head)	Fed crew hold their posts; water alone is not a day's plan	1,500–3,000 /event

Item	Qty — why	How we use it	Est ₹
First-aid kit + ABC extinguisher (4 kg) + 2 LiPo bags	1 + 1 + 2 — charging pit fire cover	Pit safety station; LiPo charging never unattended/unbagged	3,000–4,000
Power: 2 × 30 m cable reels + 4 power strips	venue sockets are never where the pit/AV is	Charging pit, AV, LED arches all reach mains	4,500–6,000
Spare-everything box (fuses, tape, batteries AA/9V, scissors, super glue)	1	The five-minute fix that saves a heat	1,500

Ops subtotal ≈ ₹20,000–30,000 (mostly one-time; wristbands/waivers/water/meals are per-event).

9. Transport, power fallback, rehearsal + insurance (real per-event lines that were missing)

Item	Qty — why	How we use it	Est ₹
Tempo/van, venue round-trip	1 /event — an 800–1,200 sq ft turf roll + 60 m PVC + bins does not fit a car	Kit to venue morning, back at night; book the same vendor every event	2,000–5,000 /event
Public-liability insurance (one-day event cover)	1 policy /event — named a must in Event Ops Standards §5 and it is NOT a permit, so it's in scope here	Covers a spectator injury at a paid 100–300-person event; get 2 quotes, cover scales with headcount	10,000–30,000 /event (quote-dependent — honest range, unverified against a live quote)
Backup power: inverter/genset rental — a DECISION line	1 /event — Event Ops Standards §2 mandates "venue mains + a generator/battery fallback"; a mains cut kills the charging pit, PA and arches	Either rent a 3–5 kVA inverter/genset (₹2,000–5,000/day, Mumbai event rental), OR accept mains risk in writing for a hall with documented reliable supply + a full pre-charged battery stock. Decide per venue — don't leave it undecided	0–5,000 /event
Rehearsal / mock event	1 /event — Event Ops Standards §2 + §5 mandate a full setup rehearsal and "run one complete mock event before doors open"	T-1 build-day access negotiated INTO the venue deal (ask for it before signing) + a full garage/terrace test-build with the kit the weekend before. Costs hours, not rupees — named here so it's planned, not skipped; if the venue charges for T-1 access, that lands in the venue line	0

The number

Block	₹
Cars + pit (rental day)	17,000–32,000

Block	₹
Floor (one-time, reused)	27,000–69,000
Gauntlet kit (one-time, reused; incl. ₹1.4–3.5k/event consumables)	40,000–61,000
Drivers' stand (rental day)	4,000–8,000
Show layer (rental day, projector route)	10,000–20,000
Branding: flex backdrop + banners (one-time, reused)	3,000–8,000
Content rig (mostly one-time)	4,000–11,000
Hired crew (day, fully hired)	13,000–25,000
Ops kit (mostly one-time; incl. crew meals)	20,000–30,000
Transport (per event)	2,000–5,000
Backup power (per-event decision: genset rent, or accepted mains risk = 0)	0–5,000
Public-liability insurance (per event)	10,000–30,000
Rehearsal / mock event (T-1 venue access + garage test-build)	0
Subtotal	≈ 1.5–3.0 L
Contingency ~10% (things this list still doesn't know)	15,000–30,000
Total ex-venue	≈ 1.7–3.3 L

Envelope check: ₹4L all-in – ex-venue ₹1.7–3.3L = **₹0.7–2.3L left for the venue**. Holds on a low-to-mid build; at the everything-hired, top-quote end the venue allowance compresses to ~₹0.7L, so the cut order matters. **Cut order if squeezed:** LED wall (never buy it first) → turf area 1,200 → 800 sq ft (–up to ₹22k) → friends on DJ + cameras (–₹6–12k) → skip the genset where the hall's mains are documented reliable (–₹2–5k) → uplights 8 → 4 → shop the insurance quote. Roughly ₹0.9–1.7L of the ex-venue number is one-time kit (floor + gauntlet kit + branding + content rig + the durable ops kit) that every later event inherits — event #2's ex-venue cost (cars + stand + show + crew + per-event ops/meals/consumables/transport/power/insurance + contingency) drops to ≈ ₹0.7–1.5L.

Start-today order: (1) call RC clubs — lock cars + pit, (2) buy turf + kit materials, (3) build the kit in one weekend, (4) book AV + stand + crew.

Price sources (Sept 2026): turf ₹30–55/sq ft — IndiaMART Mumbai dealers + ELEN/Welspun price guides (retail 25 mm runs ₹55–75; Mumbai wholesale from ₹22–30). Noodles — Amazon.in singles ₹250–650, bulk/IndiaMART ₹120–250/pc (old ₹8k/50 assumed US-style pricing; India singles cost 3–4×). EVA mats ₹140–250/pc — IndiaMART. PVC ~₹110/m 1" — IndiaMART/Flipkart. Projector rental ₹899–2,500/day base — Rentsewa/IndianRenters/rentalhire Mumbai (old ₹8–15k line priced an LED wall; now split). PA from ₹600/day small — Om Sai Sound/Rentsher Mumbai. Platform ₹2,000/4×8 ft section, ₹75/sq ft — IndiaMART Mumbai. Extinguisher ₹1,050–1,600 (Amazon) / ₹599–750 (IndiaMART); LiPo bag ₹300–700. Action cam ₹4–6k — SJCAM-class, Smartprix/Amazon.in. Stanchions ₹900–1,200/pc — IndiaMART (why we DIY the queue). RC fleet rental — no listed market; estimate anchored to ₹10–13k/car hardware cost.

Verified + changelog (2026-09-06): all prices re-checked against live India/Mumbai listings; noodles corrected up (₹8k → ₹8–12k, India unit prices), PVC corrected up (₹6k → ₹7–9k incl. joints), turf re-derived from the 9×4 m lane + Tier-3 pen (800–1,600 → 800–1,200 sq ft, ₹25–60k), projector line split from LED wall (₹8–15k → ₹2.5–6k + optional wall), car rental widened to ₹15–30k with a negotiation anchor. Quantities now derived line-by-line (noodle count from barrier metres, EVA from Block Field + Bumper Alley, PVC from the frame list, sandbags from upright count). Added: drivers' stand (was in renders, missing here), build tools, hi-vis + gloves, queue line, number tags, trophy, bins, crew water, cable-reel lengths, tripods made explicit. "How we use it" column added throughout; every subtotal + the total recomputed (was ≈ 1.3–2.1L → ≈ 1.3–2.3L ex-venue; ₹4L envelope still holds).

Second pass (2026-09-06, examiner fixes): the "builds ALL 21 rounds" claim was false — the kit had no spinner motors (Spinner Gate, The Grinder), no foam balls/barrels (Roller Rush, Barrel Roll), no ramp (Ramp Scramble), only 2 of Hex-a-Fall's 3 sweepers, no Whack Tunnel cover/paddles, no Collapse-Gate wall stock and no balloons. 7 kit lines added (+₹6–13k) → kit ₹34–46k → ₹40–59k, with a per-round coverage check so the claim is verifiable. EVA line rewritten: the 10 "underlay" mats explicitly BUILD the raised rounds (Tightrope/KotH/Bridge Squeeze). Crew block itemized (MC 5–10k + hands 2–3k + DJ 3–6k + cams 3–6k = fully-hired ₹13–25k; the old ₹15–25k had ₹8–12k unexplained) and the friends-route floor (₹7–13k) stated. Added the missing per-event lines: transport ₹2–5k, public-liability insurance ₹10–30k (an Event Ops §5 must, not a permit), and a ~10% contingency. Total ex-venue recomputed ≈ 1.3–2.3L → ≈ **1.6–3.1L**; venue headroom ₹1.7–2.7L → **₹0.9–2.4L** (envelope still closes, but only via the cut order at the top end).

Third pass (2026-09-06, examiner fixes): (1) **Bump-ring noodle math reconciled** — §1 specs 20 rings (16 + 4 spares); at the doc's own ~1.5 rings/noodle that is 14 noodles, not the "12" §3 cited (which matched nothing in §1); noodle total ~55 → **~58–60**, price band unchanged (58–60 × ₹120–250 wholesale still lands in ₹8–12k). (2) **Turf range restated to its own rates:** 800–1,200 sq ft × ₹30–55 = **₹24–66k** (the old ₹25–60k understated its own top by ₹6k), with the buy-rule stated (full area only under ~₹50/sq ft). (3) **Balloons sized to heats:** one 100-pack ≈ 5 runs, a qualifying block is 10–20 heats → **3–5 packs, ₹900–2,500, tagged /event** alongside the Collapse-Gate cardboard. (4) **Four founder-day gaps added:** branded flex backdrop + banners **₹3–8k one-time** (the reel background — a content-first event must have the name on camera; a print is a buy, DIY lock intact), crew meals **₹1.5–3k/event**, a backup-power **decision line ₹0–5k/event** (Event Ops §2 mandates mains + a fallback — rent an inverter/genset or accept documented-mains risk explicitly), and a **₹0 rehearsal line** (T-1 venue access negotiated + garage test-build — Event Ops §2/§5's mock-event mandate, now named so it can't be skipped silently). Blocks recomputed: floor ₹28–63k → **₹27–69k**, kit ₹40–59k → **₹40–61k**, ops ₹19–27k → **₹20–30k**; total ex-venue ≈ **₹1.7–3.3L**, venue headroom **₹0.7–2.3L** — same conclusion (envelope closes via the cut order at the top end), slightly tighter and now with the previously-implicit lines priced instead of hiding in contingency.
