

TorqBall — Turf Short-Run

A cheap, fast, content-first TorqBall day on a rented sports turf — the run we do **before** the full boarded event in [TorqBall — Full Run Plan](#). The turf's own walls and netting contain the cars, so the dasher-board build in [TorqBall — Ball & Boards Test](#) is skipped entirely; the money goes into ramps, branding and cameras instead. Game rules stay as in [TorqBall — Rulebook](#); the fleet rule stays as in [Car Fleet, Scale & Protection](#) (rented stock cars, nothing bolted on). Invite-only or small-ticket, half a day, ~₹40–75k all-in. Prices are indicative, Mumbai, Sept 2026 — verify before paying.

TorqBall turf short-run — layout

Example box 15 × 10 m (≈1,600 sq ft) · pitch uses 3 turf walls · no barricade build

TORQWARS

Zones

- turf — walls/net contain the cars
- play surface (pitch ≈ 700 sq ft)
- soft line — pool noodles taped down
- goal frames (LED) + backdrop
- ramp modules (chevron edges)
- camera positions

Walls do the containing:
goal A, goal B and one long side
sit on the turf's own boards/net.
Only the drivers' side needs the
10 cm noodle line (a cue, not a wall).

Pit charging never on turf:
metal tray on a table, LiPo bags,
ABC extinguisher within reach.

Minimum box that still works:
12 × 8 m (≈1,030 sq ft) — drop the
jump lane, keep 1 roller in the pitch.
Comfortable: 15 × 10 m (this drawing).
Big: 20 × 12 m — add a 2nd lane.

1. What this run is for

Goal	What it means on the day
Content — the reason it exists	Every zone is placed to be filmed: the hero frame (drivers + backdrop across the pitch), the overhead scrum, the goal-cam, the jump lane. Leave with a 20–30 s reel, a top-5 goals cut and a ramps/air cut.

Goal	What it means on the day
Prove the ball + cars on turf	The full event's ball test (TorqBall — Ball & Boards Test Part A) gets run for real here — on turf pile, with real drivers.
Learn the queue	How many people one pitch + one lane can keep busy for 3–4 hours, before we size a bigger event.
Not for	Revenue, a tournament bracket, boosts, the electronic pads, the boards. All of that waits for the full run.

2. Venue — the AC-turf reality

Honest finding (desk scan, Sept 2026): no artificial-turf box in Mumbai / Thane / Navi Mumbai could be web-confirmed as fully air-conditioned. "Indoor" here means a roofed shed, a mall floor or an office-park unit with fans. Every candidate below is **AC = ask on the phone**. The 5-a-side-AC-turf format exists in Chennai and Dubai; it is rare in MMR.

So the venue decision has two routes:

Route	What it is	Sweat risk	Cost signal
A — enclosed "indoor" turf (mall floor / office-park unit)	Turf already down, walls/net already up, power already there. Call and ask if the hall is chilled.	Medium — a mall or office-park unit is the likeliest to be genuinely climate-controlled; a roofed shed is not.	₹1,500–2,500/hr off-peak; a 3–4 h block ₹6–10k, or a 2–3 h "event package" ₹8–15k where offered
B — AC hall + our own turf (badminton hall, AC arcade floor, AC studio)	AC is certain. We bring short-pile turf rolls for the pitch (~700 sq ft) and use the hall's walls; the noodle line runs on all open sides.	None	Hall ₹400–1,500/hr. Turf roll ₹55–130/sq ft wholesale → ₹40–90k to own (reused every event), or rent by the day from a turf/exhibition supplier

Route A is cheaper on the day; Route B is the only one that guarantees "nobody sweats" and it buys a turf we keep. Decide after the five calls below.

Call list (Route A — enclosed turfs, most likely to be chilled first)

#	Venue	Area	Indoor / AC	Rate signal	Contact / listing	Ask first
1	OTM Turf & Nets / A Team Sports, Supreme Business Park	Powai (Hiranandani)	Indoor confirmed — 4th-floor office-park unit; AC unverified	Box cricket from ₹2,500/hr	Hudle, Playo	"Is the turf hall AC'd? Day rate? RC cars + wooden ramps OK?"

#	Venue	Area	Indoor / AC	Rate signal	Contact / listing	Ask first
2	Trickshot Sports Arena, High Street Mall (6th fl)	Kapurbawdi, Thane W	Indoor confirmed (mall floor); lists AC changing rooms only	Not listed	+91 99303 58081 · trickshotindia.com	Same, plus their Airolī (Mindspace) unit: ₹1,450 morning / ₹1,650 evening per hr
3	Inbox Woods Sports Arena	Ghodbunder Rd, Kasarvadavali, Thane W	Listed "Indoor"; 6 turfs; 24×7; AC unverified	From ₹500–1,200/hr	Khelomore, Playo, Hudle	Cooling? Barefoot + metal cleats already banned — rubber tyres will pass
4	Futsal Association of India arena, Timmy Arcade	Marol, Andheri E	Indoor confirmed; AC unverified	Not listed	+91 22 4005 6125	Association-run — may take a non-football demo
5	Xylo Sports (Gravity Ball Park)	Mahakali Caves Rd, Andheri E	Indoor confirmed; reviews say hot → probably no AC	Not listed	Playo, CricHeroes	Only if they've added AC since
6	Tiger Play, Citi Mall	Andheri W	"Indoor turfs" (covered rooftop); AC unverified	Not listed	6 am–midnight	Backup
7	Turf House	Mira Road E	"Indoor sports facility", 2 turfs; AC unverified	From ₹249 (per-player pass)	Hudle	Backup
8	Ileseum Raheja District futsal turf	Juinagar, Navi Mumbai	Inside an office district; AC unverified	Not listed	Hudle, Playo	Backup

Dropped after checking: Turf Park Kurla (open-air, roofed net), Smaaash Ghatkopar/Lower Parel (AC, but an arcade with no turf — a branded-activation route, not a turf hire), Tiki Taka / Astro Park / Fluid / Rink / Kick Off / Neo / PowerPlay / Sportsvilla / Ekta (not confirmable as indoor in Mumbai).

Route B fallbacks (AC certain, bring turf)

- **AC badminton halls** — CBD Belapur Sec 8, PlayAll Kharghar and similar: ~₹400/hr, wooden/synthetic floor, courts ~13.4 × 6.1 m each (two courts side by side ≈ our 15 × 10 m box).
- **AC studio / black-box** — the Route-A logic of the café shortlist in [03 Events & Tracks/Venues/](#): Harkat Studios, The Bandra Base, G5A. Hard floor, we bring turf.
- Turf roll for Route B: **short, dense pile (10–15 mm, football/box-cricket grade)** — long-pile "garden" turf bogs 1/16 cars like sand. 700 sq ft pitch = 4 rolls of 2 m × 8 m, or 12 × 8 m of 1 m rolls; taped at

the seams, sandbagged at the edges.

The six things to ask every venue

Clear floor size with everything out · floor + pile height · AC yes/no and can they run it for us · hourly vs half-day vs event-package price · power (how many 15 A sockets, where) · "we're bringing RC cars, wooden ramps on rubber mats, a small stage deck and banners on the net — any objection, and who cleans up".

3. Space — what we need and where it goes

Three sizes that work, from the layout above:

Box	Sq ft	What fits	Notes
Minimum 12 × 8 m	≈1,030	Pitch 6.5 × 10 m + driver stand + a watcher rail + pit + desk	No jump lane — put one roller across the centre spot for the "rumble" feel
Comfortable 15 × 10 m (the drawing)	≈1,600	Everything: pitch, jump lane 3 × 7.5 m, stand, ~35 watchers, pit, desk	The target
Big 20 × 12 m	≈2,600	Add a second lane or a second pitch	Only if the price is the same

Zone by zone (15 × 10 m):

Zone	Size	Where	Why there
Pitch	6.5 × 10 m (≈700 sq ft — same as TorqBall — Rulebook §3)	Long side + both goal ends against the turf's own walls	Three of four edges are already contained; both goals get a free backstop (the net)
Goals	1.4 m wide × 35 cm opening, orange frame + LED strip	Centred on the two short walls	Reads on camera from the overhead and from the far goal
Soft line	10 cm pool noodles, black/orange, taped every 60 cm, full pitch length	The one open long side	A cue for drivers and the crowd, not a wall — cars at capped speed bump it and stop
Driver stand	4.0 × 1.2 m, 45 cm high, 6 drivers	1 m behind the soft line, on the pitch's second half	Every driver sees over the ball to both goals; the backdrop behind them makes the hero frame
Backdrop	4 × 2.2 m	Directly behind the stand	The one banner every camera angle catches
Watchers	4.7 × 2.8 m: standing rail + riser with 12 chairs	Beside the stand along the same open side	≈30–35 people comfortable, all looking at the pitch, all in the overhead's background

Zone	Size	Where	Why there
Jump lane	3 × 7.5 m, one car at a time	Along the far wall, own noodle line, own 2-driver spot	Free-play and air content without disturbing a match
Pit zone	2.4 × 1.5 m table	Between stand and entry, on the turf edge	Charging on a metal tray on the table, LiPo bags, ABC extinguisher; never packs on the turf
Entry + desk	2.5 × 1.5 m	At the door	Check-in, waiver, wristband, phone/email capture
Cameras	C1 overhead on a pole/clamp at the pitch corner · C2 goal-cams clamped to the net above each goal · C3 hero on a tripod at the far-goal corner, shooting the stand	See drawing	C1 = scrum, C2 = the goal, C3 = the brand frame

Power: 4 × 15 A within 5 m of the pit (two chargers, one PA, one LED/laptop) — extension boards taped down along the wall, never across the pitch. Load-in: 9 ramp modules stack flat ($\approx 0.9 \times 0.8 \times 0.4$ m per stack of three), 2 stage decks, 2 goal frames, 1 backdrop roll, 3 bins — one tempo, one trip.

4. Cars — decide after the venue, not before

- **Rent from a club, don't buy** — 6–10 cars for a short run (4–6 on the pitch, 2 charging, 2 spare), per the shared fleet rule in [Car Fleet, Scale & Protection](#). Nothing bolted; foam bump-rings zip-tied; speed capped.
- **Class:** 1/16 brushed buggies — WLtoys 144001 (1/14) or MJX Hyper Go 16208 class. Cheap, crash-durable, parts in every hobby shop, and light enough that the tabletop is a jump, not a wreck.
- **Tyres:** rubber, mid-pin. Short-pile turf grips them; long pile does not — this is the one thing to test on the venue's actual turf at the recce (bring one car).
- **Batteries:** 2–3 packs per car, charged at 1C on the pit tray. A 3 h run at 4–6 live cars burns roughly 10–15 packs an hour — charging never stops.
- **One faster car** (a capped 1/10 brushless from the club) for the jump-lane "pro demo" and the kicker shot only. Not in a match.

Which club and which exact model is the parallel Sourcing thread's call; this run only needs the count and the class above.

5. Ramps and jumps — modular, cheap, reusable

Ramp kit — 3 modules, any combination

TORQWARS

All 80 cm wide · plywood ribs + skin · EVA foam top · sits on turf with sandbags

Combinations (what goes in the jump lane)

TABLETOP = U + D + U(rev)

the hero jump · 2.4 m long · beginners can roll it, fast cars fly it

LONG TABLETOP = U + D + D + U(rev)

3.0 m · softer for 1/16 cars at full speed

WHOOPS = R + R + R

rhythm section · pure content (cars bouncing)

KICKER = U alone (pro-demo car only)

lands flat 1.5 m out · NOT for rentals — keep it off the beginner lane

One kit = 4 U · 2 D · 3 R (9 modules, 2 × 80 cm-wide lanes' worth).
Builds a tabletop + whoops at once, or one long tabletop + a kicker for the demo car.

Three modules, all 80 cm wide, any combination:

Module	Size	Job
U — up-ramp	90 cm long, 18 cm rise, concave face (~11°, run:rise 5:1)	Every entry and exit. Used reversed as the down-ramp
D — deck	60 × 80 cm flat, 18 cm high	Extends a tabletop; two in a row for a long one
R — roller	90 cm long, 12 cm smooth hump, no lip	Rhythm section; the one module safe enough to sit inside the pitch

Combinations: Tabletop = U + D + U(rev) (2.4 m, the hero jump) · Long tabletop = U + D + D + U(rev) (3.0 m, softer at full speed) · Whoops = R + R + R (cars bouncing, pure content) · Kicker = one U with a flat landing ≥1.5 m out — **pro-demo car only, never on the beginner lane.**

One kit = 4 U + 2 D + 3 R (9 modules) — builds a tabletop and whoops at the same time, or a long tabletop plus a kicker.

Rules that keep rentals in one piece: no gaps, no doubles, no drop-offs, nothing over 18 cm; every face is a smooth curve into a flat toe (no lip to catch a bumper); the landing is always at least 1.5 m of flat turf; the lane runs one car at a time, run-up from the far end.

How a module is built — the U ramp, 5 steps

TORQWARS

9 mm ply ribs · 12 mm ply base · 4 mm bendy-ply skin · 6 mm EVA top · chevron tape · sandbag pocket

1 Cut 4 ribs

9 mm ply · 90 × 18 cm · trace one, cut 4

2 Screw ribs to the base

12 mm base 90 × 80 cm · ribs at 0/26/53/80 cm

3 Bend the skin over

4 mm bendy ply · screws every 10 cm

4 Glue the EVA top, tape the edges

6 mm EVA gym tile · contact adhesive · chevron tape

5 Join + weigh down

2 dowels + 1 velcro strap per joint · 2 kg sandbag

Materials — one kit (4 U · 2 D · 3 R)

- 12 mm commercial ply · 1 sheet 8×4 ft
- 9 mm ply · 1 sheet (ribs + deck sides)
- 4 mm bendy ply / hardboard · 1 sheet
- EVA gym tiles 1 × 1 m × 6 mm · 6 pcs
- Contact adhesive 1 L · wood glue 500 g
- Screws 25 + 40 mm · 2 boxes
- Dowel 12 mm · velcro straps · 9 sets
- Chevron hazard tape · 2 rolls
- Rubber anti-slip mat · 3 m
- Sandbags 2 kg · 9 (rice bags work)

Indicative ₹6,000–9,000 · verify at the timber yard
Weekend build · 2 people · a jigsaw + a drill

Build (one weekend, two people, a jigsaw and a drill):

1. **Cut 4 ribs** per module from 9 mm ply, 90 × 18 cm, the curve traced once and copied.
2. **Screw the ribs to a 12 mm ply base** (90 × 80 cm) at 0 / 26 / 53 / 80 cm; a rear batten ties the tall ends.
3. **Bend a 4 mm bendy-ply skin** over the ribs, screws every 10 cm — the skin is what makes the face smooth.
4. **Glue a 6 mm EVA gym tile** on top with contact adhesive (grip for rubber tyres, kinder on a nose-dive); chevron tape on both side edges.
5. **Join and weigh down:** 2 dowel pegs + 1 velcro strap per joint; a 2 kg sandbag (a rice bag) in the rear pocket; a strip of rubber anti-slip mat under every module — turf is slick and nothing gets screwed to it.

Deck (D) = a box of the same ribs cut flat; roller (R) = the same build with the hump profile. All nine modules stack flat in three piles for the tempo.

Materials — one kit	Qty	Indicative ₹
12 mm commercial ply 8 × 4 ft	1 sheet	1,400–2,000
9 mm ply 8 × 4 ft (ribs, deck sides)	1 sheet	1,100–1,500
4 mm bendy ply / hardboard 8 × 4 ft	1 sheet	700–1,000
EVA gym tiles 1 × 1 m × 6 mm	6	2,000–3,000
Contact adhesive 1 L + wood glue 500 g	—	500–700
Screws 25 + 40 mm, dowel, velcro straps (9 sets)	—	500–800
Chevron hazard tape	2 rolls	300–500

Materials — one kit	Qty	Indicative ₹
Rubber anti-slip mat	3 m	300–600
Sandbags 2 kg	9	0–300
Kit total		≈ 6,000–9,000

Where they go: the whole kit in the jump lane (15 × 10 m box); one roller across the pitch's centre spot when there is no lane (12 × 8 m box). Ramp faces carry the TW monogram and the chevron edge — they are branding as much as track.

6. Driver stand and watchers

Driver stand + watcher line — side view

TORQWARS

Drivers raised 45 cm so they see over the ball · watchers 1 m behind on a rail, chairs behind that

Driver stand

- 4.0 m long × 1.2 m deep × 0.45 m high (2 rented stage decks 2.4 × 1.2 m, or 4 pallets + ply)
- 6 drivers at 65 cm each · front rail at 0.9 m · rear step 22 cm · chevron tape on the front edge
- Faces the pitch across the noodle line · backdrop 4 × 2.2 m directly behind (the hero-shot frame)

Watchers

- Standing rail 1 m behind the stand step · 2 deep along 4.7 m ≈ 20 people at the rail
- Riser 30 cm × 2 rows × 6 chairs behind = 12 seated · total ≈ 30–35 comfortable per side
- Sightline: a standing eye at 1.6 m sees a 10 cm car at 8 m over a 10 cm noodle line — no grandstand needed

Element	Spec	Source / cost signal
Driver stand	4.0 m long × 1.2 m deep × 0.45 m high; 6 drivers at 65 cm each; rear step 22 cm; front rail at 0.9 m; chevron tape on the front edge; black skirt with the wordmark repeated	2 rented stage decks (2.4 × 1.2 m, 45 cm) ₹800–1,600/day, or 4 pallets + a ply top ≈ ₹0–1,000
Standoff	Stand 1.0 m behind the soft line; drivers' eyes ≈ 2.05 m up — a clear line over a 50 cm ball to both goals	—
Watcher rail	Rope + 4 stanchions, 1.0 m behind the stand step, along 4.7 m; 2 deep ≈ 20 people	Stanchion hire ₹150–300 each, or bamboo + rope
Watcher seats	A 30 cm riser (a third stage deck, or pallets) × 2 rows × 6 plastic chairs = 12 seated	Chairs ₹15–30 each/day

Element	Spec	Source / cost signal
Capacity	≈30–35 comfortable per side; a standing eye at 1.6 m sees a 10 cm car at 8 m over a 10 cm noodle line — no grandstand needed	—
Jump-lane drivers	A 1.1 × 3.0 m marked spot beside the lane, 2 at a time, on the turf (no deck)	Tape

7. Branding — what it should look like

Branding — the hero frame

TORQWARS

What camera C3 sees from the far goal: stand, backdrop, goal, line, ramps · black + Adrenaline Orange only

Rules: logo only from the brand kit (never redrawn) · Oxanium caps on black · orange for edges, goals, marshals, one word per line · no blue/magenta anywhere in print · every number on a board is real · empty-arena shots lose the brand — people in every frame.

The brand rules from the guideline that matter on a turf: **black hardware, Adrenaline Orange as the signal colour, Oxanium caps, the real logo only** (never redrawn, never typeset), people in every frame. No blue, no magenta on anything printed.

Piece	Size	Where	Spec	Indicative ₹
Backdrop	4 × 2.2 m	Behind the driver stand	Black flex; Primary–White wordmark large; TORQBALL in Oxanium caps; triad CARS · SKILLS · GOALS in orange beneath. Star-flex or fabric on a pipe frame	3,000–6,000 incl. frame hire
Net banners	2.4 × 0.9 m × 2–3	Tied to the turf net on the far wall (in C1's and C3's background)	Black, wordmark, one-line barrier copy REAL DRIVERS · SMALLER MACHINES · BIGGER THRILLS with one orange word	1,200–2,400

Piece	Size	Where	Spec	Indicative ₹
Stand skirt	4 × 0.45 m	Front of the driver stand	Black, wordmark repeated three times, chevron tape along the top edge	400–800
Goal frames	2 × (1.4 × 0.35 m opening)	Both short walls	PVC or timber frame painted orange, warm-white LED strip on the inside edge (USB power bank each)	1,500–3,000 for two
Soft line	~12 m	Open pitch side + lane side	Black and orange pool noodles alternating, gaffer-taped every 60 cm	800–1,500
Ramp faces	9 modules	Jump lane	Chevron tape both edges; TW monogram sticker on each up-ramp face	300–600 (stickers)
Centre-spot decal	1 × 1 m	Pitch centre	Printed vinyl mat, TW monogram, taped at the corners; doubles as the kick-off spot	500–900
Crew tees	8–10	Everyone working	Black tee, wordmark chest-left; marshals in the orange variant	250–400 each
Wristbands	100	Desk	Orange tyvek	300–500
Total branding				≈ 10,000–18,000

What not to do: no orange floor, no printed scores or fake leaderboards, no game name other than TorqBall, no "Rocket League" in print (that is a reference, not a name we own), no logos from screenshots or image generators.

8. Content — the shot list that pays for the day

Shot	Camera	When
The hero frame — six drivers on the stand, backdrop behind, cars and ball in the foreground	C3 tripod at the far-goal corner	Every match; the poster still
The scrum — 4–6 cars and the glowing ball from above	C1 overhead, locked	Every match
The goal — ball crossing the lit frame, driver reaction cut in	C2 goal-cam above each goal + a phone on the stand	Every goal
Air — tabletop from the side, low, 60 fps; the whoops head-on	Phone gimbal in the lane	Free-play blocks
First-timer reaction	Phone gimbal, roving	All day — the highest-floor clip
Build time-lapse — ramps and stand going up, banners going on the net	Phone on a clamp	Setup

Post: same-night 20–30 s reel (scrum → goal → air → reaction), T+1 top-5 goals, T+2 the ramps cut, T+3 "how we built the ramps" — the DIY cut is content the brand is built on.

9. What it costs — the short-run number

Line	Indicative ₹	Basis
Turf hire — 4 h block, off-peak weekday (Route A)	6,000–10,000	₹1,500–2,500/hr enclosed-turf band; event packages ₹8–15k where offered
Cars — 6–10 rented from a club, with 2 pit crew, half-day	8,000–20,000	Scaled from the 12–16-car day rate in TorqBall — What The Event Needs §1
Ball + 2 spares (the Part A candidate)	600–3,600	TorqBall — Ball & Boards Test Part A pricing
Ramp kit — 9 modules, owned, reused	6,000–9,000	§5 BOM
Branding — all pieces in §7	10,000–18,000	§7
Driver stand + riser (3 stage decks) + 12 chairs + stanchions	2,000–4,000	§6
Goals ×2 with LED	1,500–3,000	§7
Noodles, gaffer, zip-ties, cable covers, sandbags	1,500–2,500	Hardware store
Cameras — own phones + 1 action cam hire + 2 clamps + 1 pole	1,500–3,000	Rental day
PA — one Bluetooth party speaker + mic	0–1,500	Borrowed or hired
Crew — friends (6–8), food and water	2,500–4,000	Unpaid crew, fed
Tempo, one trip each way	2,000–3,500	Local
Waiver printing, wristbands, first-aid kit top-up	800–1,500	—
Subtotal	≈ 42,000–84,000	
Contingency ~10%	4,000–8,000	
All-in, Route A	≈ ₹46,000–92,000	vs ₹1.14–2.32 L ex-venue for the full boarded event

Route B adds the AC hall (₹1,500–6,000 for the block) and the turf roll (₹40–90k owned, or a day rental) — worth it only if the turf is bought as a permanent asset for every event after.

What is deliberately not in this number: public-liability insurance (this is a private, invite-only or ≤50-person run on a venue's own licensed floor — take the venue's cover in writing; the full ticketed event in [TorqBall — What The Event Needs](#) §4 carries its own policy), an MC and DJ (a friend on the mic), the boost kit, the boards.

10. The day — 4 hours of play, 2 to build, 1 to strike

Time	Block
T-1 week	Recce: measure the box, test one car on the turf, confirm AC + power + ramp permission in writing; ramp kit built; banners printed
08:00	Load-in. Ramps and stand first, then goals, noodle line, banners on the net, pit table, cameras
09:15	Cars unloaded, bump-rings on, one full test match on camera (the day's own ball test)
09:45	Crew brief: who calls goals, who owns the pit tray, who films what, where the extinguisher is
10:00	Doors. Open free-play on the pitch, one car at a time in the lane
10:30–12:00	Standard 2v2 / 3v3 matches , 3 min each, winners stay max 2; lane open between matches
12:00–12:20	Reset; Big Party warm-up (all cars, not scored) for the overhead
12:20–13:30	Matches continue; the pro-demo car does the kicker for C3 and the gimbal
13:30–14:00	Final match, hero-frame group shot on the stand, wind-down
14:00–15:00	Strike: cars back to the club clean, ramps stacked, banners rolled, turf swept, handback walk

11. Decisions before anything is bought

1. **Route A or B** — after the five venue calls (§2). If no turf is genuinely AC, go B and treat the turf roll as the first permanent asset.
2. **Date + box** — lock a weekday off-peak block; measure it.
3. **Cars** — club and model from the Sourcing thread; bring one to the recce.
4. **Guest list** — invite-only at ~40–50 (friends, RC hobbyists, 3–5 creators who post) keeps permits out of scope and the reel dense with faces.

Pairs with: [TorqBall — Rulebook](#) (the game) · [TorqBall — Ball & Boards Test](#) (the ball candidates this run tests for real) · [TorqBall — What The Event Needs](#) + [TorqBall — Full Run Plan](#) (the full boarded event this run leads to) · [Car Fleet, Scale & Protection](#) (the rented-fleet rule) · [Event Ops Standards \(all games\)](#) (safety, LiPo, waivers).
